Immediate Alert Service (IAS)

Bluetooth® Test Suite

- **Revision:** IAS.TS.1.0.2
- **Revision Date:** 2018-06-27
- **Group Prepared By:** BTI
- **Feedback Email:** bti-main@bluetooth.org

**Abstract:**
This document defines test structures and procedures for the conformance test of devices implementing the Immediate Alert Specification.

Use of this specification is your acknowledgement that you agree to and will comply with the following notices and disclaimers. You are advised to seek appropriate legal, engineering, and other professional advice regarding the use, interpretation, and effect of this specification.

Use of Bluetooth specifications by members of Bluetooth SIG is governed by the membership and other related agreements between Bluetooth SIG and its members, including those agreements posted on Bluetooth SIG’s website located at www.bluetooth.com. Any use of this specification by a member that is not in compliance with the applicable membership and other related agreements is prohibited and, among other things, may result in (i) termination of the applicable agreements and (ii) liability for infringement of the intellectual property rights of Bluetooth SIG and its members.

Use of this specification by anyone who is not a member of Bluetooth SIG is prohibited and is an infringement of the intellectual property rights of Bluetooth SIG and its members. The furnishing of this specification does not grant any license to any intellectual property of Bluetooth SIG or its members. THIS SPECIFICATION IS PROVIDED “AS IS” AND BLUETOOTH SIG, ITS MEMBERS AND THEIR AFFILIATES MAKE NO REPRESENTATIONS OR WARRANTIES AND DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY, TITLE, NON-INFRINGEMENT, FITNESS FOR ANY PARTICULAR PURPOSE, OR THAT THE CONTENT OF THIS SPECIFICATION IS FREE OF ERRORS. For the avoidance of doubt, Bluetooth SIG has not made any search or investigation as to third parties that may claim rights in or to any specifications or any intellectual property that may be required to implement any specifications and it disclaims any obligation or duty to do so.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, BLUETOOTH SIG, ITS MEMBERS AND THEIR AFFILIATES DISCLAIM ALL LIABILITY ARISING OUT OF OR RELATING TO USE OF THIS SPECIFICATION AND ANY INFORMATION CONTAINED IN THIS SPECIFICATION, INCLUDING LOST REVENUE, PROFITS, DATA OR PROGRAMS, OR BUSINESS INTERRUPTION, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, AND EVEN IF BLUETOOTH SIG, ITS MEMBERS OR THEIR AFFILIATES HAVE BEEN ADVISED OF THE POSSIBILITY OF THE DAMAGES.

If this specification is a prototyping specification, it is solely for the purpose of developing and using prototypes to verify the prototyping specifications at Bluetooth SIG sponsored IOP events. Prototyping Specifications cannot be used to develop products for sale or distribution and prototypes cannot be qualified for distribution.

Products equipped with Bluetooth wireless technology (“Bluetooth Products”) and their combination, operation, use, implementation, and distribution may be subject to regulatory controls under the laws and regulations of numerous countries that regulate products that use wireless non-licensed spectrum. Examples include airline regulations, telecommunications regulations, technology transfer controls and health and safety regulations. You are solely responsible for complying with all applicable laws and regulations and for obtaining any and all required authorizations, permits, or licenses in connection with your use of this specification and development, manufacture, and distribution of Bluetooth Products. Nothing in this specification provides any information or assistance in connection with complying with applicable laws or regulations or obtaining required authorizations, permits, or licenses.

Bluetooth SIG is not required to adopt any specification or portion thereof. If this specification is not the final version adopted by Bluetooth SIG’s Board of Directors, it may not be adopted. Any specification adopted by Bluetooth SIG’s Board of Directors may be withdrawn, replaced, or modified at any time. Bluetooth SIG reserves the right to change or alter final specifications in accordance with its membership and operating agreements.

Copyright © 2012–2018. All copyrights in the Bluetooth Specifications themselves are owned by Apple Inc., Ericsson AB, Intel Corporation, Lenovo (Singapore) Pte. Ltd., Microsoft Corporation, Nokia Corporation, and Toshiba Corporation. The Bluetooth word mark and logos are owned by Bluetooth SIG, Inc. Other third-party brands and names are the property of their respective owners.
1 Scope

This Bluetooth document contains the Test Suite Structure (TSS) and Test Cases (TC) to test the Bluetooth Immediate Alert Service Specification.

The objective of this test suite is to provide a basis for interoperability tests for Bluetooth devices giving a high probability of air interface interoperability between different manufacturers’ Bluetooth devices.
2 References, Definitions, and Abbreviations

2.1 References
This Bluetooth document incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter.

[1] Bluetooth Test Strategy and Terminology Overview
[2] Bluetooth Core Specification, Version 4.0 or later
[3] Immediate Alert Service Specification v1.0

2.2 Definitions
For the purpose of this Bluetooth document, the definitions from [1] and [2] apply.

2.3 Abbreviations
For the purpose of this Bluetooth document, the definitions from [1] and [2] apply.
3 Test Suite Structure (TSS)

3.1 Overview

The Immediate Alert Service requires GAP, SM, and GATT. This is illustrated in Figure 3.1.

![Immediate Alert Service Test Model](image)

**Figure 3.1: Immediate Alert Service Test Model**

3.2 Test Strategy

The test objectives are to verify functionality of the Immediate Alert Service within a Bluetooth Host and enable interoperability between Bluetooth Hosts on different devices. The testing approach is to cover mandatory and optional requirements in the service specification and to match these to the support of the IUT as described in the ICS Proforma.

The basis for the test approach is the general concepts and conformance testing principles defined in ISO/IEC 9646-1 and ISO/IEC 9646-2; both are part of the OSI Conformance Testing Methodology and Framework (CTMF).

The conformance test equipment shall provide an implementation of the Radio Controller and the parts of the Host needed to perform the test cases defined in the Immediate Alert Service Test Suite. For some test cases, it is necessary to stimulate the IUT from an Upper Tester. In practice, this could be implemented as a special test interface, an MMI, or another interface supported by the IUT.

The Immediate Alert Service test suite contains Valid Behavior (BV) tests complemented with Invalid Behavior (BI) tests where required. The test coverage mirrored in the test suite structure is the result of a process that started with catalogued specification requirements that were logically grouped and assessed for testability enabling coverage in defined test purposes.

The test suite structure is a tree with the first level representing the protocol groups as listed in section 3.3.

3.3 Test Groups

The following test groups have been defined.
3.3.1 Service Definition
Verify the service definition.

3.3.2 Characteristic Declaration
Verify the presence and contents of characteristic declarations.

3.3.3 Characteristic Write
Verify characteristics which support writing can be written.

3.3.4 Service Procedures
Verify the operation of additional procedures defined in the service specification.
4 Test Cases (TC)

4.1 Introduction

4.1.1 Test Case Identification Conventions

Test cases shall be assigned unique identifiers per the conventions in [1]. The convention used here is `<spec abbreviation>/<IUT role>/<class>/<feat>/<func>/<subfunc>/<cap>/<xx><nn><y>.

Bolded ID parts shall appear in the order prescribed. Non-bolded ID parts (if applicable) shall appear between the bolded parts. The order of the non-bolded parts may vary from test suite to test suite, but shall be consistent within each individual test suite.

</tr>
</tbody>
</table>

Table 4.1: Immediate Alert Service TC Feature Naming Convention

4.1.2 Conformance

When conformance is claimed, all capabilities indicated as mandatory for this Specification shall be supported in the specified manner (process-mandatory). This also applies for all optional and conditional capabilities for which support is indicated. All mandatory capabilities, and optional and conditional capabilities for which support is indicated, are subject to verification as part of the Bluetooth Qualification Program.

The Bluetooth Qualification Program may employ tests to verify implementation robustness. The level of implementation robustness that is verified varies from one Specification to another and may be revised for cause based on interoperability issues found in the market.

Such tests may verify:

- That claimed capabilities may be used in any order and any number of repetitions that is not excluded by the Specification, OR
- That capabilities enabled by the implementations are sustained over durations expected by the use case, OR
- That the implementation gracefully handles any quantity of data expected by the use case, OR
- That in cases where more than one valid interpretation of the Specification exist, the implementation complies with at least one interpretation and gracefully handles other interpretations OR
• That the implementation is immune to attempted security exploits.

A single execution of each of the required tests is required in order to constitute a pass verdict. However, it is noted that in order to provide a foundation for interoperability, it is necessary that a qualified implementation consistently and repeatedly pass any of the applicable tests.

In any case, where a member finds an issue with the Test Plan Generator, the Test Case as described in the Test Suite, or with the Test System utilized, the Member is required to notify the responsible party via an errata request such that the issue may be addressed.

4.1.3 Pass/Fail Verdict Conventions

Each test case has an Expected Outcome section, which outlines all the detailed pass criteria conditions that shall be met by the IUT to merit a Pass Verdict.

The convention in this test suite is that, unless there are a specific set of fail conditions outlined in the test case, the IUT fails the test case as soon as one of the pass criteria conditions cannot be met. If this occurs the outcome of the test shall be the Fail Verdict.

4.2 Setup Preambles

The procedures defined in this section are provided for information, as they are used by test equipment in achieving the initial conditions in certain tests.

4.2.1 ATT Bearer on LE Transport

Follow the preamble procedure described in [5] section 4.2.1.2.

4.3 Service Definition

Verify the service definition.

4.3.1 IAS/SR/SD/BV-01-C [Service Definition]

• Test Purpose

Verify that the IUT has one instantiation of the Immediate Alert Service as a primary service.

• Reference

[3] 2

• Initial Condition

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

• Test Procedure

1. Discover all primary services by executing the test procedure of GATT test case GATT/SR/GAD/BV-01-C, Discover All Primary Services, in [5] or primary services by service UUID by executing the test procedure of GATT test case GATT/SR/GAD/BV-02-C, Discover Primary Services by Service UUID in [5] with the service UUID set to "Immediate Alert".

2. Verify one attribute handle range with the service UUID set to "Immediate Alert" is returned, containing the starting handle and the ending handle of the service definition.
• Expected Outcome

Pass verdict

One attribute handle range with the service UUID set to «Immediate Alert» is returned, containing the starting handle and the ending handle of the service definition.

4.4 Characteristic Declaration

This test group contains test cases to verify that the characteristic property field of the characteristic declaration meets the requirements of the service.

4.4.1 IAS/SR/DEC/BV-01-C [Characteristic Declaration – Alert Level]

• Test Purpose

Verify the presence of and contents of the characteristic declaration specified by the service.

• Reference

[3] 3

• Initial Condition

The handle range of the service has been previously discovered by the Lower Tester in test case IAS/SR/SD/BV-01-C [Service Definition].

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

• Test Procedure

1. Discover all characteristics of the service by executing the test procedure of GATT test case GATT/SR/GAD/BV-04-C, Discover All Characteristics of a Service, in [5].

2. For a discovered Alert Level characteristic that, verify the characteristic properties field of the characteristic declaration meets the requirements of the service.

• Expected Outcome

Pass verdict

The characteristic is discovered and the characteristic properties field of the characteristic declaration meets the requirements of the service.

Only one instance of the characteristic is found.

4.5 Characteristic Write without Response

This test group contains test cases to verify that the characteristics that support write can be written.

4.5.1 IAS/SR/CW/BV-01-C [Characteristic Write without Response – Alert Level]

• Test Purpose

Write characteristic value.
• Reference

[3] 3.1.1

• Initial Condition

The handle of the Alert Level characteristic has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

If the IUT requires a bonding procedure then perform a bonding procedure.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic require a specific security mode or security level, establish a connection meeting those requirements.

• Test Procedure

1. Select a value that is valid for the characteristic. Write the characteristic value by executing the test procedure of GATT test case GATT/SR/GAW/BV-01-C, Write Without Response - to Server, in [5].
2. Verify the characteristic value is successfully written.

• Expected Outcome

Pass verdict

The characteristic value is successfully written.

4.6 Service Procedures

This test group contains test cases to verify the operation of additional procedures defined in the service specification.

4.6.1 IAS/SR/SP/BV-01-C [Writing Alert Level Behavior]

• Test Purpose

Verify the IUT starts alerting when the Alert Level characteristic is written.

• Reference

[3] 4.1

• Initial Condition

If the IUT requires a bonding procedure then perform a bonding procedure.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

• Test Procedure

1. Run the procedure described in test case IAS/SR/CW/BV-01-C [Characteristic Write without Response – Alert Level] with the alert level set to "Mild Alert".
2. Verify that the IUT starts alerting with a Mild Alert. (Note: The alerting action is implementation specific.)

3. Run the procedure described in test case IAS/SR/CW/BV-01-C [Characteristic Write without Response – Alert Level] with the alert level set to "High Alert".

4. Verify that the IUT starts alerting with a High Alert. (Note: The alerting action is implementation specific.)

5. Run the procedure described in test case IAS/SR/CW/BV-01-C [Characteristic Write without Response – Alert Level] with the alert level set to "No Alert".

6. Verify that the IUT stops alerting.

• Note

The alerting action is implementation specific.

• Expected Outcome

**Pass verdict**

The IUT starts alerting at the correct level when an alert level of "Mild Alert" or "High Alert" is written, and stops alerting when an alert level of "No Alert" is written.
5 Test Case Mapping

The Test Case Mapping Table (TCMT) maps test cases to specific capabilities in the ICS.

The columns for the TCMT are defined as follows:

**Item:** contains an y/x reference, where y corresponds to the table number and x corresponds to the feature number as defined in the ICS Proforma for Immediate Alert Service (IAS) [4]. If the item is defined with Protocol, Profile or Service abbreviation before y/x, the table and feature number referenced are defined in the abbreviated ICS proforma document.

**Feature:** recommended to be the primary feature defined in the ICS being tested or may be the test case name.

**Test Case(s):** the applicable test case identifiers required for Bluetooth Qualification if the corresponding y/x references defined in the Item column are supported.

For purpose and structure of the ICS/IXIT proforma and instructions for completing the ICS/IXIT proforma refer to the Bluetooth ICS and IXIT proforma document.
