HID Service (HIDS)

Bluetooth® Test Specification

- **Issued**: 2016-07-13
- **Document Number**: HIDS.TS.1.0.3
- **Group Prepared by**: BTI
- **Feedback Email**: bti-main@bluetooth.org
- **Abstract**
  
  This document defines test structures and procedures for conformance test of products implementing the HID Service Specification.
## Revision History

<table>
<thead>
<tr>
<th>Revision History</th>
<th>Date</th>
<th>Comments</th>

| D09r01-D09r010   | 11-07-12-11-11-07 | First Draft.  
Updates for Option 1a  
Addresses some comments and updated according to HID Service Spec D09r13  
Accepted changes of v03  
Removed GATT TS test case references e.g. TP/GAD/SR/BV-02-C (GATT/SR/GAD/BV-02-C after ID conversion), added description instead e.g. [Discover Primary Service by Service UUID]  
Addressed all remaining comments  
Changes made according to HID service spec D09r25. Added test case reference name in addition to test case description  
Added new section for Descriptors Read and new test cases under Service procedure section –All “Command Response” Test cases and “Battery level mapping in HID report descriptor” Test case  
Removed some comments and accepted changes  
Added test case for Notification behavior in boot and report mode.  
Added new section for Descriptor Write Test cases  
TCMT changes according HID ICS D09r07  
Other updates as per HIDS Spec D09v26  
Updates as per HIDS Spec D09v32  
Updates as per HIDS Spec D09v36.37  
Updates as per HIDS Spec D09v38, D09v39  
Updates as per comments from Chris Church, and added value in Requirements column as per new BTI directive |
<p>| 1.0.0r1          | 11-11-30 | Removed duplicate Table 4.3, submitted to BTI as v1.0 |
| 1.0.0r2          | 11-12-11 | Addressed BTI comments |
| 1.0.0r3          | 11-12-13 | Updates to TCMT table as per latest HIDS.ICS.V1.0r03 |
| 1.0.0.r4         | 11-12-14 | Closed comments on Read and Discover test cases. Renamed Long Characteristic read test cases |</p>

DISCLAIMER AND COPYRIGHT NOTICE

This disclaimer applies to all draft specifications and final specifications adopted by the Bluetooth SIG Board of Directors (both of which are hereinafter referred to herein as a Bluetooth “Specification”). Your use of this Specification in any way is subject to your compliance with all conditions of such use, and your acceptance of all disclaimers and limitations as to such use, contained in this Specification. Any user of this Specification is advised to seek appropriate legal, engineering or other professional advice regarding the use, interpretation or effect of this Specification on any matters discussed in this Specification.

Use of Bluetooth Specifications and any related intellectual property is governed by the Promoters Membership Agreement among the Promoter Members and Bluetooth SIG (the “Promoters Agreement”), certain membership agreements between Bluetooth SIG and its Adopter and Associate Members, including, but not limited to, the Membership Application, the Bluetooth Patent/Copyright License Agreement and the Bluetooth Trademark License Agreement (collectively, the “Membership Agreements”) and the Bluetooth Specification Early Adopters Agreements (1.2 Early Adopters Agreements) among Early Adopter members of the unincorporated Bluetooth SIG and the Promoter Members (the “Early Adopters Agreement”). Certain rights and obligations of the Promoter Members under the Early Adopters Agreements have been assigned to Bluetooth SIG by the Promoter Members.

Use of the Specification by anyone who is not a member of Bluetooth SIG or a party to an Early Adopters Agreement (each such person or party, a “Member”) is prohibited. The use of any portion of a Bluetooth Specification may involve the use of intellectual property rights (“IPR”), including pending or issued patents, or copyrights or other rights. Bluetooth SIG has made no search or investigation for such rights and disclaims any undertaking or duty to do so. The legal rights and obligations of each Member are governed by the applicable Membership Agreements, Early Adopters Agreement or Promoters Agreement. No license, express or implied, by estoppel or otherwise, to any intellectual property rights are granted herein.

Any use of the Specification not in compliance with the terms of the applicable Membership Agreements, Early Adopters Agreement or Promoters Agreement is prohibited and any such prohibited use may result in (i) termination of the applicable Membership Agreements or Early Adopters Agreement and (ii) liability claims by Bluetooth SIG or any of its Members for patent, copyright and/or trademark infringement claims permitted by the applicable agreement or by applicable law.

THE SPECIFICATION IS PROVIDED “AS IS” WITH NO WARRANTIES WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY, NONINFRINGEMENT, FITNESS FOR ANY PARTICULAR PURPOSE, SATISFACTORY QUALITY, OR REASONABLE SKILL OR CARE, OR ANY WARRANTY ARISING OUT OF ANY COURSE OF DEALING, USAGE, TRADE PRACTICE, PROPOSAL, SPECIFICATION OR SAMPLE.

Each Member hereby acknowledges that products equipped with the Bluetooth wireless technology (“Bluetooth Products”) may be subject to various regulatory controls under the laws and regulations applicable to products using wireless non licensed spectrum of various governments worldwide. Such laws and regulatory controls may govern, among other things, the combination, operation, use, implementation and distribution of Bluetooth Products. Examples of such laws and regulatory controls include, but are not limited to, airline regulatory controls, telecommunications regulations, technology transfer controls and health and safety regulations. Each Member is solely responsible for the compliance by their Bluetooth Products with any such laws and regulations and for obtaining any and all required authorizations, permits, or licenses for their Bluetooth Products related to such regulations within the applicable jurisdictions. Each Member acknowledges that nothing in the Specification provides any information or assistance in connection with securing such compliance, authorizations or licenses. NOTHING IN THE SPECIFICATION CREATES ANY WARRANTIES, EITHER EXPRESS OR IMPLIED, REGARDING SUCH LAWS OR REGULATIONS.

ALL LIABILITY, INCLUDING LIABILITY FOR INFRINGEMENT OF ANY INTELLECTUAL PROPERTY RIGHTS OR FOR NONCOMPLIANCE WITH LAWS, RELATING TO USE OF THE SPECIFICATION IS EXPRESSLY DISCLAIMED. To the extent not prohibited by law, in no event will Bluetooth SIG or its Members or their affiliates be liable for any damages, including without limitation, lost revenue, profits, data or programs, or business interruption, or for special, indirect, consequential, incidental or punitive damages, however caused and regardless of the theory of liability, arising out of or related to any furnishing, practicing, modifying, use or the performance or implementation of the contents of this Specification, even if Bluetooth SIG or its Members or their affiliates have been advised of the possibility of such damages. BY USE OF THE SPECIFICATION, EACH MEMBER EXPRESSLY WAIVES ANY CLAIM AGAINST BLUETOOTH SIG AND ITS MEMBERS OR THEIR AFFILIATES RELATED TO USE OF THE SPECIFICATION.

If this Specification is an intermediate draft, it is for comment only. No products should be designed based on it except solely to verify the prototyping specification at SIG sponsored IOP events and it does not represent any commitment to release or implement any portion of the intermediate draft, which may be withdrawn, modified, or replaced at any time in the adopted Specification.

Bluetooth SIG reserves the right to adopt any changes or alterations to the Specification it deems necessary or appropriate.

Copyright © 2011–2016. The Bluetooth word mark and logos are owned by Bluetooth SIG, Inc. All copyrights in the Bluetooth Specifications themselves are owned by Ericsson AB, Lenovo (Singapore) Pte. Ltd., Intel Corporation, Microsoft Corporation, Apple Inc., Nokia Corporation and Toshiba Corporation. Other third-party brands and names are the property of their respective owners.

4.7.2 HIDS/HD/LCR/BV-02-C [Characteristic Read – Report Characteristic (Input)] .......... 23
4.7.3 HIDS/HD/LCR/BV-03-C [Characteristic Read – Report Characteristic (Output)] .......... 23
4.7.4 HIDS/HD/LCR/BV-04-C [Characteristic Read – Report Characteristic (Feature)] .......... 23
4.8 Configure Notification

Configure Notification Test Cases

4.8.1 HIDS/HD/CON/BV-01-C [Configure Notification – Report (Input)]

4.8.2 HIDS/HD/CON/BV-02-C [Configure Notification – Boot Keyboard Input Report Characteristic]

4.8.3 HIDS/HD/CON/BV-03-C [Configure Notification – Boot Mouse Input Report Characteristic]

4.9 Characteristic Notification

Characteristic Notification Value Test Cases

4.9.1 HIDS/HD/CN/BV-01-C [Characteristic Notification Report (Input)]

4.9.2 HIDS/HD/CN/BV-02-C [Characteristic Notification – Boot Keyboard Input Report Characteristic]

4.9.3 HIDS/HD/CN/BV-03-C [Characteristic Notification – Boot Mouse Input Report Characteristic]

4.10 Characteristic Write

Characteristic Write Test Cases

4.10.1 HIDS/HD/CW/BV-01-C [Characteristic Write – Report (Input)]

4.10.2 HIDS/HD/CW/BV-02-C [Characteristic Write – Report (Output)]

4.10.3 HIDS/HD/CW/BV-03-C [Characteristic Write – Report (Feature)]

4.10.4 HIDS/HD/CW/BV-04-C [Characteristic Write – Boot Keyboard Input Report Characteristic]

4.10.5 HIDS/HD/CW/BV-05-C [Characteristic Write – Boot Keyboard Output Report Characteristic]

4.10.6 HIDS/HD/CW/BV-06-C [Characteristic Write – Boot Mouse Input Report Characteristic]

4.11 Characteristic Write Without Response

Characteristic Write Without Response Test Cases

4.11.1 HIDS/HD/CW/BV-07-C [Characteristic Write – Report (Output)]

4.11.2 HIDS/HD/CW/BV-08-C [Characteristic Write – Protocol Mode (Boot Mode)]

4.11.3 HIDS/HD/CW/BV-09-C [Characteristic Write – Protocol Mode (Report Mode)]

4.11.4 HIDS/HD/CW/BV-10-C [Characteristic Write – HID Control Point (Suspend)]

4.11.5 HIDS/HD/CW/BV-11-C [Characteristic Write – HID Control Point (Exit Suspend)]

4.11.6 HIDS/HD/CW/BV-12-C [Characteristic Write – Boot Keyboard Output Report Characteristic]

4.12 Descriptors Read

Descriptor Read Value Test Cases

4.12.1 HIDS/HD/DR/BV-01-C [Client Characteristic Configuration Descriptor of Report Characteristic]
4.12.4 HIDS/HD/DR/BV-04-C [Client Characteristic Configuration Descriptor of Boot Keyboard Input Report Characteristic] ..................................................................................................................31
4.12.5 HIDS/HD/DR/BV-05-C [Client Characteristic Configuration Descriptor of Boot Mouse Input Report Characteristic] ..................................................................................................................................................31

5 Test Case Mapping.......................................................................................................................................34
1 Scope

This Bluetooth document contains the Test Suite Structure (TSS) and Test Cases (TC) to test the Bluetooth HID Service Specification.

The objective of this test specification is to provide a basis for interoperability tests for Bluetooth devices giving a high probability of air interface interoperability between different manufacturers' Bluetooth devices.
2 References, Definitions, and Abbreviations

2.1 References
This Bluetooth document incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter.

[1] Bluetooth Test Strategy and Terminology Overview
[2] Specification of the Bluetooth System, version 4.0 or later
[3] HID Service Specification 1.0
[4] ICS Proforma for HID Service 1.0
[7] Characteristic and Descriptor descriptions are accessible via the Bluetooth SIG developer portal.

2.2 Definitions
For the purpose of this Bluetooth document, the definitions in [1] and [2] apply.

2.3 Abbreviations
For the purpose of this Bluetooth document, the abbreviations in [1] and [2] apply.
3 Test Suite Structure (TSS)

3.1 Overview

The HID Service requires the presence of GAP, SM, and GATT. This is illustrated in Figure 3.1.

![HID Service Test Model](image)

*Figure 3.1: HID Service Test Model*

3.2 Test Strategy

The test objectives are to verify functionality of the HID Service within a Bluetooth Host and enable interoperability between Bluetooth Hosts on different devices. The testing approach is to cover mandatory and optional requirements in the service specification and to match these to the support of the IUT as described in the ICS Proforma.

The test equipment shall provide an implementation of the Radio Controller and the parts of the Host needed to perform the test cases defined in the HID Service Test Specification. For some test cases, it is necessary to stimulate the IUT from an Upper Tester. In practice, this could be implemented as a special test interface, an MMI, or another interface supported by the IUT.

The HID Service test suite contains Valid Behavior (BV) tests complemented with Invalid Behavior (BI) tests where required. The test coverage mirrored in the test suite structure is the result of a process that started with catalogued specification requirements that were logically grouped and assessed for testability enabling coverage in defined test cases.

The test suite structure is a tree with the first level representing the protocol groups.

- Service definition
• Characteristic declaration
• Characteristic descriptors
• Characteristic read
• Long Characteristic Read
• Characteristic write
• Configure notification
• Characteristic notification
• Descriptors Read
• Descriptors Write
• Service procedures

The interface between the IUT and the Upper Tester may be:
• A man-machine interface
• Provided by the IUT manufacturer

3.3 Test Groups
The following test groups have been defined.

3.3.1 Service Definition
Verify the existence of defined service.

3.3.2 Characteristic Declaration
Verify the presence and contents of characteristic declarations.

3.3.3 Characteristic Descriptors
Verify the presence and contents of characteristic descriptors.

3.3.4 Characteristic Read
Verify that characteristics that support reading can be read. Verify the formatting and value of characteristic values.

3.3.5 Long Characteristic Read
Verify that characteristics that support long characteristic reading can be read. Verify the formatting and value of characteristic values.
3.3.6  Characteristic Write
Verify characteristics which support writing can be written.

3.3.7  Configure Notification
Verify characteristics can be configured for notification.

3.3.8  Characteristic Notification
Verify characteristics which support notification can be notified.

3.3.9  Descriptor Read
Verify values descriptors can be read.

3.3.10 Descriptor Write
Verify descriptors values can be written.

3.3.11 Service Procedures
Verify the operation of additional procedures defined in the Service specification.
4 Test Cases (TC)

4.1 Introduction

4.1.1 TC Naming Conventions

Test cases shall be assigned unique identifiers per the conventions in [1]. The convention used here is `<spec abbreviation>/<IUT role>/<feat>/xx-<nn>-<y>`. Test group abbreviations for class, feature, function, sub-function or capability (as applicable to this test specification) are defined in Table 4.1.

**Table 4.1: HID Service TP Feature Naming Convention**

4.1.2 Conformance

When conformance is claimed, all capabilities indicated as mandatory for this Specification shall be supported in the specified manner (process-mandatory). This also applies for all optional and conditional capabilities for which support is indicated. All mandatory capabilities, and optional and conditional capabilities for which support is indicated, are subject to verification as part of the Bluetooth certification program.

The Bluetooth Qualification Program may employ tests to verify implementation robustness. The level of implementation robustness that is verified varies from one Specification to another and may be revised for cause based on interoperability issues found in the market.

Such tests may verify:

- That claimed capabilities may be used in any order and any number of repetitions that is not excluded by the Specification, OR
• That capabilities enabled by the implementations are sustained over durations expected by
the use case, OR

• That the implementation gracefully handles any quantity of data expected by the use case,
OR

• That in cases where more than one valid interpretation of the Specification exist, the
implementation complies with at least one interpretation and gracefully handles other
interpretations OR

• That the implementation is immune to attempted security exploits.

A single execution of each of the required tests is required in order to constitute a pass verdict.
However, it is noted that in order to provide a foundation for interoperability, it is necessary that
a qualified implementation consistently and repeatedly pass any of the applicable tests.

In any case, where a member finds an issue with the Test Plan Generator, the Test Case as
described in the Test Specification, or with the Test System utilized, the Member is required to
notify the responsible party via an errata request such that the issue may be addressed.

4.1.3 Pass/Fail Verdict Conventions

Each test case has an Expected Outcome section, which outlines all the detailed pass criteria
conditions that shall be met by the IUT to merit a Pass Verdict.

The convention in this test specification is that, unless there is a specific set of fail conditions
outlined in the test case, the IUT fails the test case as soon one of the pass criteria conditions
cannot be met and in case this occurs the outcome of the test shall be the Fail Verdict.

4.2 Setup Preambles

The procedures defined in this section are provided for information, as they are used by test
equipment in achieving the initial conditions in certain tests.

4.2.1 ATT Bearer on LE Transport

Follow the preamble procedure described in [5] section 4.2.1.2.

4.3 Service Definition

Verify the service definition.

4.3.1.1 HIDS/HD/SD/BV-01-C [Service Definition]

• Test Purpose

Verify the IUT has one or more instantiations of the HID service as a primary service.

• Reference

[3] 2.1
• **Initial Condition**

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

• **Test Procedure**

1. Discover primary service-by-service UUID by executing the test procedure of GATT test case GATT/SR/GAD/BV-01-C [Discover All Primary Services] or GATT/SR/GAD/BV-02-C [Discover Primary Services by Service UUID - from server] in [5] with the service UUID set to "HID Service".

2. Verify at least one attribute handle range is returned, containing the starting handle and the ending handle of each HID service definition.

• **Expected Outcome**

**Pass verdict**

At least one attribute handle range is returned, containing the starting handle and the ending handle of each HID service definition.

### 4.4 Characteristic Declaration

• **Test Purpose**

This test group contains test cases to verify that the characteristic properties bit field of the *Attribute Value* field of the characteristic declaration meets the requirements of the service. The verification is performed one property at a time, as enumerated in the test cases in Table 4.2, using this generic test procedure.

• **Reference**

[3] 2.2

• **Initial Condition**

The handle range of each instance of the HID service has been previously discovered by the Lower Tester in test case HIDS/HD/SD/BV-01-C [Service Definition].

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

• **Test Procedure**

The following test procedure applies to the test cases listed in Table 4.2:

2. For a discovered characteristic that is listed in Table 4.2, verify the characteristic properties bit field of the *Attribute Value* field of the characteristic declaration meets the requirements of the service.

3. Repeat steps 1-2 for each instance of the service.

- Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.2:

**Pass verdict**
The characteristic is discovered and the characteristic properties bit field of the *Attribute Value* field of the characteristic declaration meets the requirements of the service.

### Characteristic Declaration Test Cases

</tbody>
</table>

*Table 4.2: Characteristic Declaration Test Cases*

### 4.5 Characteristic Descriptors

- Test Purpose
This test group contains test cases to verify that the characteristic descriptors meet the requirements of the service. The verification is done one descriptor at a time, as enumerated in the test cases in Table 4.3.

- Reference

[3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- Initial Condition

The handle range of each characteristic referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

- Test Procedure

The following test procedure applies to the test cases listed in Table 4.3:

1. Discover all characteristic descriptors of the characteristic by executing the test procedure of GATT test case GATT/SR/GAD/BV-06-C [Discover All Characteristic Descriptors - from server] in [5] using the handle range of the characteristic. The IUT returns one or more handle-UUID pairs.

2. Verify that the value of the characteristic descriptor meets the requirements of the service.

3. Repeat steps 1-2 for each handle-UUID pair.

4. Repeat steps 1-3 for each instance of the characteristic and service.

- Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.3:

Pass verdict

The characteristic descriptor is discovered, the characteristic descriptor is read, and the value of the characteristic descriptor meets the requirements of the service.
Characteristic Descriptor Test Cases

</tbody>
</table>

Table 4.3: Characteristic Descriptor Test Cases

4.6 Characteristic Read

- Test Purpose

This test group contains test cases to read and verify that the characteristic values required by the service are compliant with the specification. The verification is done one value at a time, as enumerated in the test cases in Table 4.4, using this generic test procedure.

- Reference

[3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- Initial Condition

The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic require a specific security mode or security level, establish a connection meeting those requirements.

- Test Procedure
The following test procedure applies to the test cases listed in Table 4.4:

1. For Protocol Mode, Boot Keyboard Input Report Characteristic, Boot Mouse Input Report Characteristic and Boot Keyboard Output Report Characteristic, read the characteristic value by executing the test procedure of GATT test case GATT/SR/GAR/BV-01-C [Read Characteristic Value] or GATT/SR/GAR/BV-03-C [Read using Characteristic UUID]

2. Verify that the characteristic value meets the requirements of the service.

3. For the rest of the characteristics, read the characteristic value by executing the test procedure of GATT test case GATT/SR/GAR/BV-01-C [Read Characteristic Value - from server] in [5].

4. Verify that the characteristic value meets the requirements of the service.

5. Repeat steps 1-2 for each instance of the characteristic and service.

- Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.4:

**Pass verdict**

The characteristic is successfully read and the characteristic value meets the requirements of the service.

### 4.7 Long Characteristic Read

- **Test Purpose**

This test group contains test cases to read and verify that the long characteristic values required by the service are compliant with the specification. The verification is done one value at a time, as enumerated in the test cases in *Table 4.6*, using this generic test procedure.

- **Reference**

  [3] 2.5, 2.6

- **Initial Condition**

  The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.
Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic require a specific security mode or security level, establish a connection meeting those requirements.

- **Test Procedure**

  The following test procedure applies to the test cases listed in Table 4.6:

  1. Read the characteristic value by executing the test procedure of GATT test case GATT/SR/GAR/BV-04-C [Read Long Characteristic Value - from server] in [5].
  2. Verify that the characteristic value meets the requirements of the service.
  3. Repeat steps 1-2 for each instance of the characteristic and service.

- **Expected Outcome**

  The following pass and fail verdicts apply to the test cases listed in Table 4.6:

  **Pass verdict**
  The characteristic is successfully read and the characteristic value meets the requirements of the service.

- **Notes**

  The ATT_Error_Responses “Request Not Supported” or “Attribute Not Long” is acceptable outcomes in response to step 1.

### Long Characteristic Read Value Test Cases

</table>

*Table 4.5: Long Characteristic Read Value Test Cases*

### 4.8 Configure Notification

- **Test Purpose**
This test group contains test cases to verify responses to enabling and/or disabling characteristic notifications. The verification is done one value at a time, as enumerated in the test cases in Table 4.6, using this generic test procedure.

- **Reference**
  
  [3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- **Initial Condition**
  
  The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

  The handle of the client characteristic configuration descriptor of each characteristic referenced in the test cases below has been previously discovered by the Lower Tester during the test procedure in section 4.5 or is known to the Lower Tester by other means.

  If the IUT requires a bonding procedure then perform a bonding procedure.

  Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

  If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.

  For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

- **Test Procedure**
  
  The following test procedure applies to the test cases listed in Table 4.6:

  1. Disable notification by writing value 0x0000 to the client characteristic configuration descriptor of the characteristic using the test procedure of GATT test case GATT/SR/GAW/BV-08-C [Write Characteristic Descriptors – from server] in [5].

  2. Enable notification by writing value 0x0001 to the client characteristic configuration descriptor of the characteristic.

  3. Repeat steps 1-2 for each instance of the characteristic and service.

- **Expected Outcome**
  
  The following pass and fail verdicts apply to the test cases listed in Table 4.6:

  **Pass verdict**
  
  The characteristic is successfully written and the value returned when read is consistent with the value written.
Configure Notification Test Cases

<table>
<thead>
<tr>
<th>Test Case</th>
<th>Requirements</th>
</tr>
</thead>
</table>

Table 4.6: Configure Notification Test Cases

4.9 Characteristic Notification

- Test Purpose

This test group contains test cases to verify compliant operation when the IUT sends notifications of characteristic values. The verification is done one value at a time, as enumerated in the test cases in Table 4.7, using this generic test procedure.

Verify that the IUT sends notifications of characteristic values.

- Reference

[3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- Initial Condition

The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

The characteristic is configured for notification.

If the IUT requires a bonding procedure then perform a bonding procedure.

If desired, establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.

For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

- Test Procedure
The following test procedure applies to the test cases listed in Table 4.7:

1. Disable notification by writing value 0x0000 to the client characteristic configuration. Perform an action on the IUT that will induce it to send a notification of the characteristic.

2. A connection is established between the Lower Tester and IUT meeting the security requirements of the IUT, if not already done so prior to step 1.

3. The Lower Tester receives an ATT_Handle_Value_Notification from the IUT containing the characteristic handle and value.

4. Verify that the characteristic value meets the requirements of the service.

* Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.7:

**Pass verdict**

The characteristic is successfully notified and the characteristic value meets the requirements of the service.

### Characteristic Notification Value Test Cases

<table>
<thead>
<tr>
<th>Test Case</th>

</table>

*Table 4.7: Characteristic Notification Value Test Cases*

### 4.10 Characteristic Write

* Test Purpose

This test group contains test cases to write to characteristic values and verify that the values written by the service are compliant with specification. The verification is done one value at a time, as enumerated in the test cases in Table 4.8, using this generic test procedure.

* Reference

[3] 2.5, 2.6, 2.7, 2.9

* Initial Condition*
The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

If the IUT requires a bonding procedure then perform a bonding procedure.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.

For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

• Test Procedure

The following test procedure applies to the test cases listed in Table 4.8:

1. Select a value that is valid for the characteristic. Write the characteristic value by executing the test procedure of GATT test case GATT/SR/GAW/BV-03-C [Write Characteristic Value - to Server] in [5].
2. Verify that the characteristic value is successfully written.

• Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.8:

Pass verdict
The characteristic value is successfully written.

4.11 Characteristic Write Without Response

- **Test Purpose**

  This test group contains test cases to write without response to characteristic values and verify that the values written by the service are compliant with specification. The verification is done one value at a time, as enumerated in the test cases in *Table 4.10*, using this generic test procedure.

- **Reference**

  [3] 2.10, 2.11

- **Initial Condition**

  The handle of each characteristic value referenced in the test cases that follow has been previously discovered by the Lower Tester during the test procedure in section 4.4 or is known to the Lower Tester by other means.

  If the IUT requires a bonding procedure then perform a bonding procedure.

  Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.
If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.

For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

**Test Procedure**

The following test procedure applies to the test cases listed in Table 4.10:

1. Select a value that is valid for the characteristic. Write the characteristic value by executing the test procedure of GATT test case GATT/SR/GAW/BV-01-C [Write Without Response - to server] in [5].

2. Verify that the characteristic value is successfully written.

**Expected Outcome**

The following pass and fail verdicts apply to the test cases listed in Table 4.10:

- **Pass verdict**
  - The characteristic value is successfully written.

4.12 Descriptors Read

- Test Purpose

This test group contains test cases to read and verify that the descriptor values required by the service are compliant with the specification. The verification is done one value at a time, as enumerated in the test cases in Table 4.10, using this generic test procedure.

- Reference

[3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- Initial Condition

The handle of each descriptor referenced in the test cases below has been previously discovered by the Lower Tester during the test procedure in section 4.5 or is known to the Lower Tester by other means.

Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.

For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

- Test Procedure

The following test procedure applies to the test cases listed in Table 4.10:

1. Read the descriptor value by executing the test procedure of GATT test case GATT/SR/GAR/BV-06-C [Read Characteristic Descriptors – from server] in [5].

2. Verify that the descriptor value meets the requirements of the service.

3. Repeat steps 1-2 for each instance of the descriptor.

- Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.10:

Pass verdict
The descriptor is successfully read and the descriptor value meets the requirements of the service.

### 4.13 Descriptors Write

- **Test Purpose**

  This test group contains test cases to write and verify that the descriptors behavior required by the service is compliant with the specification. The verification is done one value at a time, as enumerated in the test cases in Table 4.11, using this generic test procedure.

- **Reference**

  [3] 2.5.3, 2.6.3, 2.7.3, 2.9.3

- **Initial Condition**

  The handle of each descriptor referenced in the test cases below has been previously discovered by the Lower Tester during the test procedure in section 4.5 or is known to the Lower Tester by other means.

  Establish an ATT Bearer connection between the Lower Tester and IUT as described in section 4.2.1.

  If IUT permissions for the characteristic descriptor require a specific security mode or security level, establish a connection meeting those requirements.
For Test Cases involving the Boot Keyboard Input Report, and/or the Boot Mouse Input Report characteristics, the Lower Tester shall write the value 0x00 to the Protocol Mode characteristic to configure the HID Device in Boot Protocol Mode.

• Test Procedure

The following test procedure applies to the test cases listed in Table 4.11:

1. Write the descriptor value by executing the test procedure of GATT test case GATT/SR/GAW/BV-08-C [Write Characteristic Descriptors – from server] in [5].
2. Verify that the descriptor behavior meets the requirements of the service.
3. Repeat steps 1-2 for each instance of the descriptor.

• Expected Outcome

The following pass and fail verdicts apply to the test cases listed in Table 4.11:

Pass verdict
The descriptor value is successfully written and the descriptor behavior meets the requirements of the service.

**4.14 Service Procedures**

This test group contains test cases to verify all expected features and behavior of the service and to ensure it is compliant with specification.

4.14.1.1 HIDS/HD/SP/BV-01-C [Notification Behavior of multiple Input reports]

• Test Purpose

Verify that the IUT can send input reports once it has been configured to do so.
• Reference

[3] 2.5.1

• Initial Condition

The Report Characteristic is configured for notification.

If the IUT requires a bonding procedure then perform a bonding procedure.

If desired, establish an ATT Bearer connection between the Lower Tester and IUT as described in Section 4.2.1.

If IUT permissions for the Report characteristic require a specific security mode or security level, establish a connection meeting those requirements.

• Test Procedure

1. Perform an action on the IUT that will induce it to send notifications of the Report Characteristic of type Input Report.

2. A connection is established between the Lower Tester and IUT meeting the security requirements of the IUT, if not already done so prior to step 1.

3. The Lower Tester receives an ATT_Handle_Value_Notification from the IUT containing the Report Characteristic handle and value.

4. Verify that the characteristic value meets the requirements of the service.

5. Repeat steps 3-4 for each received notification until the IUT stops sending notifications.

6. The Lower Tester configures the Report characteristic to disable notifications.

7. Repeat steps 1-2 with notifications disabled.

8. Verify that the Tester does not receive an ATT_Handle_Value_Notification from the IUT containing the Report Characteristic.

• Expected Outcome

Pass verdict

The IUT sends a notification of the correct Input Report characteristic, upon reconnection.

The value of the Input Report characteristic meets the requirements of the service.

The IUT sends one or more notifications of the Report characteristic when the appropriate Reports have been set for notification.

The value of the characteristic meets the requirements of the service.

The IUT stops sending notifications of the Report characteristic after the Lower Tester configures the characteristic to disable notifications.
5 Test Case Mapping

The Test Case Mapping Table (TCMT) maps test cases to specific capabilities in the ICS. Profiles, protocols and services may define multiple roles, and it is possible that a product may implement more than one role. The product shall be tested in all roles for which support is declared in the ICS document. For products which support more than one role, a separate TCMT shall be filled out for each role, and separate tests shall be conducted for each role.

The columns for the TCMT are defined as follows:

Item: contains an y/x reference, where y corresponds to the table number and x corresponds to the feature number as defined in the ICS Proforma for HID Service [4]. If the item is defined with Protocol, Profile or Service abbreviation before y/x, the table and feature number referenced are defined in the abbreviated ICS proforma document.

Feature: recommended to be the primary feature defined in the ICS being tested or may be the test case name.

Test Case(s): the applicable test case identifiers required for Bluetooth Qualification if the corresponding y/x references defined in the Item column are supported.

Test Case Applicable: may be used to note if a test is required based on the supported features.

For purpose and structure of the ICS/IXIT proforma and instructions for completing the ICS/IXIT proforma refer to the Bluetooth ICS and IXIT proforma document.
